

DA Phase 2 : Créations de modèles

Fichier existant : trainSet.csv

Mouvement	Genre	Index	Vacc	Vacc	...	Vacc
-----------	-------	-------	------	------	-----	------

Objectif du DA :

- calculer les moyennes des varrAcc des 6 mouvements \Rightarrow trainSet.csv
- calculer les moyennes des varrAcc par genre (6 modèles par genre) \Rightarrow fiModelMen.csv + fiModelWomen.csv

Constantes :

```

TRAIN_SET = "trainSet.csv"
FI_MODEL = "fiModel.csv"
FI_MODEL_MEN = "fiModelMen.csv"
FI_MODEL_WOMEN = "fiModelWomen.csv"
LENGTH_TITLE = 50
NB_PATH = 15
LG_PATH = 10
NB_FILES = 360
NB_DATA = 600
    
```

Structures :

```

paths[NBPATH][LGPATH] = { /*libellés des colonnes*/ }
sumAveragesMen[NB_DATA]
sumAveragesWomen[NB_DATA]
nbValuesMen[NB_DATA]
nbValuesWomen[NB_DATA]
    
```

```
